WHAT DOES RITUXAN TREAT?

Rheumatoid arthritis (RA): with another prescription medicine called methotrexate, to reduce the signs and symptoms of moderate to severe active RA in adults, after treatment with at least one other medicine called a tumor necrosis factor (TNF) antagonist has been used and did not work well enough. People with serious infections should not receive Rituxan. It is not known if Rituxan is safe or effective in children.

IMPORTANT SIDE EFFECT INFORMATION

Rituxan can cause serious side effects that can lead to death. These include infusion reactions, severe skin and mouth reactions, hepatitis B virus (HBV) reactivation, and progressive multifocal leukoencephalopathy (PML).

For more information, please see pages 14-17 and the enclosed full Prescribing Information, including the Medication Guide.
WHAT DOES ACTEMRA ® (tocilizumab) TREAT?
ACTEMRA is a prescription medicine called an interleukin-6 (IL-6) antagonist. It is used when at least one other medicine called a disease modifying antirheumatic drug (DMARD) has been used and did not work well.

Important Side Effect Information
ACTEMRA can cause serious side effects including stomach tears; changes in blood test results that check for low neutrophil and platelet counts, and increases in certain liver enzyme levels. It can also cause flushing after injecting, and nervous system problems.

Tell your doctor if you're allergic to ACTEMRA or if you've had a reaction to ACTEMRA previously.

Tell your doctor if you are planning to become pregnant, are pregnant, or nursing. It is not known if Rituxan is safe or effective in children.

Serious Side Effects
For more Important Safety Information, please see ACTEMRA.com for full Prescribing Information and Medication Guide, including information about the potential benefits of ACTEMRA with methotrexate and when it may be time to change your RA treatment.

To learn more about Rituxan, visit the RITUXAN & YOU PATIENT SUPPORT PROGRAM online at Rituxan.com or call 1-877-311-8972.

Tell your doctor right away if you are experiencing any side effects. You may report side effects to the FDA at 1-800-FDA-1088 or 1-888-835-2555.
What happens?

This attack by the immune system causes fluid to build up in the joints, which results in pain and inflammation. It can also cause permanent cartilage and bone erosion.

There is no cure for RA, but it can be treated. Research shows that the best way to slow the joint damage caused by RA is early diagnosis and appropriate treatment.

There are several symptoms that can include:
- Swollen joints
- Pain
- Low fever
- Stiff joints
- Skin rash
- Headaches

Your joints may also be warm to the touch, and you may experience limited movement. Remember that RA is symmetrical, meaning that a symptom on one side of the body tends to occur in the same location on the other side as well.

What are the symptoms?

The symptoms of RA can vary from person to person and from day to day. Symptoms can include:
- Swollen joints
- Stiff joints
- Pain
- Low fever

Experiencing RA symptoms but still not feeling relief? It may be time for a change in your treatment. Learn more on page 9.
What medicines are used to treat RA?
The main types of medicines used to treat RA are:

- Traditional or nonbiologic disease modifying anti-rheumatic drugs (DMARDs) such as methotrexate
- Biologics, including tumor necrosis factor inhibitors (TNFi’s, also known as anti-TNF), T-cell costimulation modulators, and B-cell targeted therapy
- Glucocorticoids or steroids such as prednisone
- Nonsteroidal anti-inflammatory drugs (NSAIDs) such as aspirin

What are biologics?
Biologics target specific parts of the immune system that are thought to lead to inflammation and are thought to play a key role in RA. They are usually given to people who have moderate to severe RA. Biologics may not only reduce pain and symptoms, but may also limit the progression and joint damage of RA. Keep in mind that if you are not seeing a response from one biologic, consider talking to your doctor about changing therapies.

What is B-cell targeted therapy?
B-cells are part of the immune system. They are believed to play an important role in RA
B-cell targeted therapy targets the specific B-cells that may play a role in RA
Rituxan® (rituximab) is a B-cell targeted therapy

Serious side effect information
Keep in mind that Rituxan can cause serious side effects that can lead to death, including infusion reactions, severe skin and mouth reactions, hepatitis B virus (HBV) reactivation, and progressive multifocal leukoencephalopathy (PML). Please refer to pages 14-17 for more information.

Understand RA (continued)

Important Side Effect Information

Up to 6 months of relief with Rituxan

The person featured in this brochure who is taking Rituxan is a member of the Rituxan Ambassador program, which is sponsored by Genentech USA, Inc. and Biogen Idec Inc. Genentech compensates the Ambassadors for their time and expense while presenting their stories.

What time is the right time?
The answer to that question can vary from person to person, but there are a number of signs that everyone can look for. For example:
- If you’re having trouble with daily activities
- If you’re experiencing different symptoms
- If your symptoms haven’t improved enough
- If your treatment is losing its effectiveness
- If your symptom relief isn’t lasting as long as you’d like

If you recognize any of these signs, be sure to bring them up at your next appointment. And if you’ve taken an anti-TNF treatment—ask your doctor if Rituxan® (rituximab) could be right for you.*

It’s important to know the possible side effects of Rituxan before considering treatment. To learn more, refer to the Important Side Effect Information section on pages 14-17.

TIME FOR A CHANGE?
As you may know, sometimes people with RA need to change treatments before finding one that’s right for them. The key is to closely monitor your response to treatment and figure out when a change might be needed. That way you can help slow the progression of RA.

If you recognize any of these signs, be sure to bring them up at your next appointment. And if you’ve taken an anti-TNF treatment—ask your doctor if Rituxan® (rituximab) could be right for you.*

It’s important to know the possible side effects of Rituxan before considering treatment. To learn more, refer to the Important Side Effect Information section on pages 14-17.

* Common anti-TNF treatments are Cimzia® (certolizumab pegol), Enbrel® (etanercept), Humira® (adalimumab), Remicade® (infliximab), and Simponi® (golimumab). All trademarks are the property of their respective owners.

FOR MORE INFORMATION, ASK YOUR DOCTOR FOR A RITUXAN RA RESOURCE KIT.
YOU CAN ALSO CALL 1-877-474-8892 OR VISIT WWW.RITUXAN.COM.
UP TO 6 MONTHS OF RELIEF WITH RITUXAN

Even if you haven’t been helped enough by an anti-TNF treatment, Rituxan® (rituximab) could work for you. Here are some of the potential benefits, as well as information about possible side effects.

Up to 6 months of RA symptom relief
Rituxan has been shown to work for up to 6 months after 1 course of treatment (2 infusions). In fact, a study showed that at 6 months, 91% of the people taking Rituxan (plus methotrexate) experienced RA symptom improvement (called an ACR20 response) as opposed to 18% of people taking methotrexate alone.

A study also showed that, of the people who saw improvement from their first course of Rituxan (plus methotrexate) and then went on to receive a second course, 54% saw an additional 6 months of improvement (as opposed to 40% of people who received methotrexate alone).

Treat with 4 infusions a year
Rituxan has been shown to work for up to 6 months after 2 infusions given 2 weeks apart. So over a year, you could manage your RA with 4 infusions. Your first infusion typically lasts 4-6 hours. Infusions after your first may take slightly less time, but will still last several hours.

Serious side effect information
Keep in mind that Rituxan can cause some serious and life-threatening side effects. These include tumor lysis syndrome (TLS), serious infections, heart problems, kidney problems, stomach and serious bowel problems that can sometimes lead to death, and low blood cell counts. Please refer to pages 14-17 for more information.

I WAS LOOKING FOR SOMETHING DIFFERENT, SO MY DOCTOR RECOMMENDED RITUXAN.

Lee | Taking Rituxan with methotrexate to treat his RA

HAVING 2 COURSES OF TREATMENT 6 MONTHS APART HAS HELPED ME STAY ON TRACK.

Lee | Taking Rituxan with methotrexate to treat his RA
I was looking for something different, so my doctor recommended RituXan.

Lee | Taking RituXan with methotrexate to treat his RA

Having 2 courses of treatment 6 months apart has helped me stay on track.

Lee | Taking RituXan with methotrexate to treat his RA

Please see the enclosed FULL PRESCRIBING INFORMATION, including the MEDICATION GUIDE, for information on the most serious side effects and additional important side effect information.

Help slow joint damage
RituXan® (rituximab) can help slow the progression of joint damage caused by RA. Furthermore, a study showed that following 2 years of treatment with RituXan (plus methotrexate), 67% of people did not experience any further joint damage. And taking RituXan with methotrexate was shown to be more effective at slowing the progression of joint damage than methotrexate alone. Additionally, for the patients who had no progression in the first year, 87% also had no progression in the second year.

Side effect information
Common side effects during RituXan treatment include infusion reactions, chills, infections, body aches, tiredness, and low white blood cell count. Other side effects include aching joints during or within hours of receiving an infusion and more frequent upper respiratory tract infections. Please refer to pages 14-17 for more information.

QUESTIONS?
SPEAK TO ONE OF OUR CALL CENTER NURSES AT 1-877-474-8892

For more information, ask your doctor for a RituXan RA RESOURCE KIT. You can also call 1-877-474-8892 or visit www.RituXan.com.
When considering any new treatment, it’s important to weigh the benefits and risks. To understand which risks are most relevant to you and how they relate to your health, be sure to talk with your doctor.

What is the most important information I should know about Rituxan?

Rituxan® (rituximab) can cause serious side effects that can be fatal, including:

- **Infusion reactions**—infusion reactions are the most common side effect of Rituxan treatment. Serious infusion reactions can happen during or up to 24 hours after an infusion. During clinical trials, less than 1% of people taking Rituxan experienced serious infusion reactions.
- **Severe skin and mouth reactions**—painful sores or ulcers on your skin, lips, or in your mouth; blisters; peeling skin; rash; or small, pus-filled blisters.
- **Return of hepatitis B virus (HBV)**—if you previously had hepatitis B, Rituxan can cause the disease to become an active infection again, even if you are not showing any symptoms.
- **PML (progressive multifocal leukoencephalopathy)**—a rare but serious brain infection caused by the JC virus.

PLEASE SEE THE ENCLOSED FULL PRESCRIBING INFORMATION, INCLUDING THE MEDICATION GUIDE, FOR INFORMATION ON THE MOST SERIOUS SIDE EFFECTS AND ADDITIONAL IMPORTANT SIDE EFFECT INFORMATION.

What should I tell my doctor before receiving Rituxan?

It is important to tell your doctor or healthcare team if you:

- Previously had serious infusion reactions to Rituxan.
- Have a history of other medical conditions including:
  - Heart problems
  - Irregular heartbeat
  - Chest pain
  - Lung or kidney problems
  - Have had an infection, currently have an infection, or have a weakened immune system
  - Have recently been given a vaccine, plan to get a vaccine, or are in contact with someone who is planning to get a vaccine. You should not get certain vaccines before or after receiving Rituxan. Some types of vaccines can spread to people with a weakened immune system and cause serious problems
  - Are pregnant or plan to become pregnant. Talk to your doctor about effective birth control
  - Are breast-feeding or plan to breast-feed
  - Are taking or have taken other prescription or nonprescription medicines, especially anti-TNF (tumor necrosis factor) medicines or DMARDs (disease modifying anti-rheumatic drugs)
What are the possible side effects of Rituxan?

Rituxan® (rituximab) can cause serious and life-threatening side effects, including:

- **Tumor lysis syndrome**—has occurred in patients using Rituxan to treat non-Hodgkin’s lymphoma (NHL) and chronic lymphocytic leukemia (CLL). It is caused by cancer cells breaking down and can lead to kidney failure and the need for dialysis treatment or cause abnormal heart rhythm.

- **Serious infections**—these can happen during and after treatment and can be fatal. During clinical trials, 2% of people taking Rituxan developed serious infections.

- **Heart problems**—Rituxan may cause chest pain and irregular heartbeat. Your doctor or healthcare team may provide treatment or decide to stop treating with Rituxan if you experience these symptoms.

- **Kidney problems**—especially if you are taking it for non-Hodgkin’s lymphoma (NHL). Your doctor should do blood tests to check how well your kidneys are working.

- **Stomach and serious bowel problems that can sometimes be fatal**—tell your doctor right away if you have any stomach area pain during treatment with Rituxan.

- **Changes in blood cell counts**—during treatment with Rituxan, your doctor or healthcare team should do regular blood tests to monitor your blood cell counts.

**IMPORTANT SIDE EFFECT INFORMATION (continued)**

**What are the possible side effects of Rituxan?**

- **Infusion reactions**

- **Chills**

- **Infections**

- **Body aches**

- **Tiredness**

- **Low white blood cell count**

**Please see the enclosed full prescribing information, including the medication guide, for information on the most serious side effects and additional important side effect information.**

**Tell your doctor about any side effect that bothers you or does not go away. These are not all of the possible side effects with rituxan. For more information, ask your doctor or pharmacist. Call your doctor for medical advice about side effects. You may report side effects to the FDA at 1-800-FDA-1088 or www.fda.gov/medwatch, or to Genentech at 1-888-835-2555.**

**What are common side effects during treatment with Rituxan?**

- **Aching joints during or within hours of receiving an infusion**

- **More frequent upper respiratory tract infections**
What does ACTEMRA® (tocilizumab) treat?

ACTEMRA is a monoclonal antibody called an IL-6 receptor antagonist. ACTEMRA is used to treat adults with rheumatoid arthritis (RA) who have not responded adequately to at least one other medicine called a disease modifying antirheumatic drug (DMARD) has been used and did not work well.

Important Side Effect Information

ACTEMRA can cause serious side effects. These side effects can include:

- Cartilage and bone erosion
- Inflammation
- This attack by the immune system causes fluid to leak into the joints and soft tissues. It can also cause permanent damage to joints and soft tissues.
- ACTEMRA changes the way your immune system works. This can make you more likely to get infections or make any current infection worse. Some people taking ACTEMRA have died from these infections.

Tell your doctor if you are allergic to ACTEMRA or if you have had a serious reaction to it.

ACTEMRA can cause serious infections. You may get infections that are more severe than usual.

Tell your doctor if you have had any of the following side effects:

- Changes in blood test results that check for low neutrophil and platelet counts, and increases in certain liver functions
- Nausea; vomiting; diarrhea
- Rash
- Cough
- Headache
- Increase in the number of times you get infections
- Infections of the mouth
- Fever
- Chills
- Night sweats
- Changes in your blood pressure
- Tiredness
- Night sweats
- Feeling of drainage in your ears or nose
- Swelling of your joints

Please note Rituxan and ACTEMRA are both made by the same company, Genentech, Inc., which is why we are sharing this Important Safety Information with you.

Tell your doctor if you’re allergic to ACTEMRA or if you’ve had a serious reaction to it. Infection can become serious. Some infections may become severe if you’re taking ACTEMRA.

Tell your doctor if you have these or any other side effect that bothers you or does not go away.

WHAT DOES RITUXAN® (rituximab) TREAT?

Rheumatoid arthritis (RA): with another prescription medicine called methotrexate, to reduce the signs and symptoms of moderate to severe active RA in adults, after treatment with at least one other medicine called a tumor necrosis factor (TNF) antagonist has been used and did not work well enough.

People with serious infections should not receive Rituxan. It is not known if Rituxan is safe or effective in children.

What is the most important information I should know about Rituxan?

Infusion reactions — infusion reactions are the most common side effect of Rituxan treatment. Serious infusion reactions can happen during or up to hours after an infusion. During clinical trials, less than 1% of people taking Rituxan experienced serious infusion reactions

• Severe skin and mouth reactions skin, lips, or in your mouth; blisters; peeling skin; rash; or small, pus-filled blisters

• Return of hepatitis B virus (HBV) — if you previously had hepatitis B, Rituxan can cause the disease to become an active infection again, even if you are not showing any symptoms

• Progressive multifocal leukoencephalopathy (PML) — a rare but serious brain infection caused by the JC virus Rituxan can cause serious and life-threatening side effects, including:

• TLS (tumor lysis syndrome) — has occurred in patients using Rituxan to treat non-Hodgkin's lymphoma (NHL) and chronic lymphocytic leukemia (CLL). It is caused by cancer cells breaking down and can lead to kidney failure and the need for dialysis treatment or cause abnormal heart rhythm

• Serious infections — these can happen during and after treatment and can be fatal

• Serious infections — especially if you are taking it for NHL. Your doctor should

• Kidney problems — do blood tests to check how well your kidneys are working

• Stomach and serious bowel problems that can sometimes be fatal — tell your doctor right away if you have any stomach area pain during treatment

• Changes in blood cell counts — during treatment with Rituxan, your doctor or healthcare team should do regular blood tests to monitor your blood cell counts

• Body aches • Tiredness • Low white blood cell count • More frequent upper respiratory tract infections

Tell your doctor about any side effect that bothers you or does not go away.

Please see the enclosed Full Prescribing Information, including the Medication Guide, for the most serious side effects and additional important side effect information.

Call your doctor for medical advice about side effects. You may report side effects to the FDA at 1-800-FDA-1088 or Genentech at 1-888-835-2555.
Moisten, fold, seal, and mail back.

WHAT DOES ACTEMRA ® (tocilizumab) TREAT?

ACTEMRA is a prescription medicine called an interleukin- (IL-) receptor antagonist. ACTEMRA is used to treat adults with moderately to severely active rheumatoid arthritis (RA) after at least one other medicine called a disease modifying antirheumatic drug (DMARD) has been used and did not work well.

ACTEMRA can cause serious side effects including:

- Gastrointestinal perforations, which can cause stomach tears; changes in blood test results that check for low neutrophil and platelet counts, and increases in certain liver enzymes. If you develop these problems, your doctor may stop your medicine and give you another medicine to treat these problems.
- Nervous system problems. If you develop these problems, your doctor may stop your medicine.

Tell your doctor if you're allergic to ACTEMRA or if you've had a reaction to ACTEMRA previously.

Common side effects include:

- Upper respiratory tract infections (like common cold and sinus infections)
- Headache
- Increased blood pressure (also called hypertension)
- Injection site reactions

Tell your doctor if you have these or any other side effect that bothers you or does not go away.

Tell your doctor if you are planning to become pregnant, are pregnant, or are breastfeeding. To learn more, call 1-877-311-8972 or talk to your doctor. You should decide if you will take ACTEMRA or breast-feed. You should not do both. If you are pregnant and taking ACTEMRA, join the pregnancy registry. To learn more, call 1-800-1088-FDA or www.FDA.gov/medwatch. You may also call Genentech at 1-888-835-2555.

For more Important Safety Information, please see ACTEMRA.com.

What does RITUXAN ® (rituximab) TREAT?

RITUXAN is a prescription medicine made by Genentech, Inc. RITUXAN is used to treat moderate to severe active rheumatoid arthritis (RA) in adults after at least one other medicine called a tumor necrosis factor (TNF) antagonist has been used and did not work well enough.

RITUXAN can cause serious side effects including:

- Infections. Your doctor may stop your medicine if you develop infections.
- Cancer. You have an increased risk of getting certain cancers while you are being treated with RITUXAN. If you develop cancer, your doctor may stop your medicine.

Tell your doctor if you have been exposed to tuberculosis (TB) or have symptoms of TB.

Tell your doctor if you take any medicine that affects your immune system, such as certain biologic medicines used to treat certain medical conditions, because this may increase your risk of infections.

Tell your doctor if you are allergic to RITUXAN.

Common side effects include:

- Upper respiratory tract infections (like cold and sinus infections)
- Headache
- Increased blood pressure (also called hypertension)
- Injection site reactions

Tell your doctor right away if you are experiencing any side effects. You may report side effects to the FDA at 1-800-FDA-1088 or www.FDA.gov/medwatch. You may also call Genentech at 1-888-835-2555.

For more Important Safety Information, please see RITUXAN.com.

Please note Rituxan and ACTEMRA are both made by the same company, Genentech, Inc., which is why we are sharing this Important Safety Information with you.
